
CYBER SECURITY

Dr. Pradeep Kumar
Independent Professor
pmsuccess81@gmail.com

If I install it today, the internet is essential, but fighting with cyber attacks

With the increase in speed of internet, both cyber-attacks and cyber security speed has increased,

But artificial intelligence is aware of the award of prior information on cyber-attacks.

Cloud computing is searching authentic customers, Bot's are not giving wrong data, and enterprises mapping rightly placed profit,

Digital marketing is not appreciating the stealing of credit card information, designed data and other useful information, Big data needs security in bigger volumes and for bigger purposes,

Managing data analysis from wrong decisions and to save the law and country one time,

Cryptography can manage high-level cyber security through many functions,

Save live streaming from bad comments to save the country discomfort,

These are the camps of computer programming language for cyber security to always complete the journey

Save the economy from ransom ware other cyber-attacks and live long divine journey.

*****Flow Computer Advocacy*****

Things to flow, control is law, syntaxes, possibilities, many come to pay in software, checking abilities, climates are understanding, preparation is advertising, computer programming languages, options the pricing,

Flow is also broadcasting, addressing the psychology, sequential flow, starred flow, flowered flow, carpet flow, operate flow, password, switching efficacies, breaking attacks, managing directions, analytic flow, strengthening miracle,

The divine flow of savings, network the flow of banking, branching flow of government, strengthening the degree, lecturing flow of voices, practising flow of music free,

Tomato flow of medicine, e-commerce the general wake spree,
